

Exploiting Earth Observations to benefit Society

STREAM project connecting space data to society

www.stream-srf.com

STREAM is a Xjenza Malta Space Research Fund project intended to provide personalised on-demand satellite earth observations to users via dedicated downstream services, easily accessible over on the web, mobile and tablets, in user-friendly formats. The project delivers a prototype digital platform with state-of-the-art data and information services tailor-made to serve local stakeholders, operators, economic endeavours and general users to optimize, empower and enhance their activities, operations and products.

Innovation in STREAM
Zoom, select and get
satellite data where and
when you need

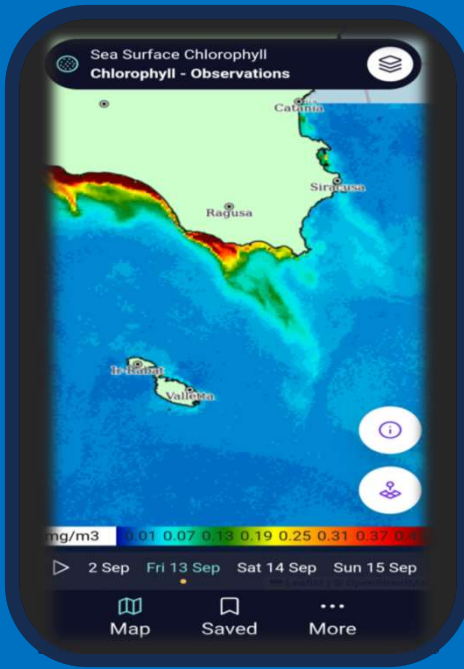

Project led by the Malta College of Arts, Science & Technology
Project Partners

Project Leader: Prof. Aldo Drago
aldo.drago@mcast.edu.mt

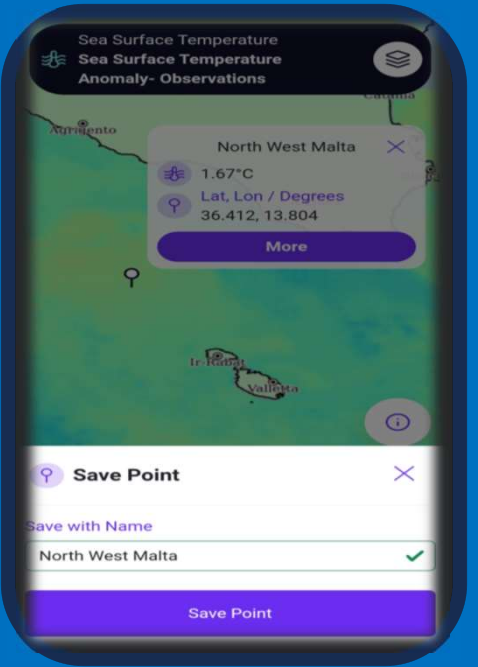

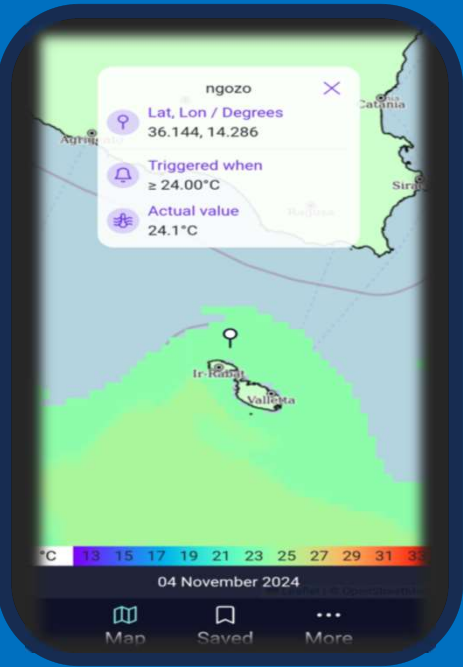

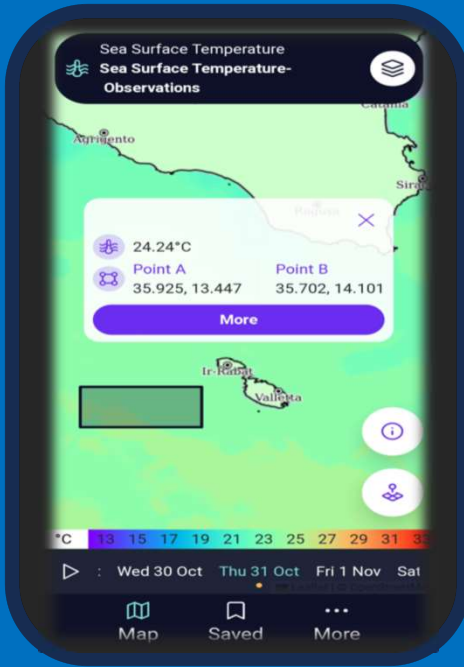

What to find in the App

SST and CHLL satellite data and forecasts

Added value derived data layers

View and access historical data and climatologies

Personalised viewing and download data on-demand

Alerts for user-selected thresholds

Save your sites for future viewings
